

- ① Statistics
- ② Machine Learning
- ③ Re-inforcement learning
- ④ Natural Language Processing
- ⑤ Artificial Intelligence
- ⑥ Generative AI.

Machine Learning → Used to predict, classify or form clusters of similar data.

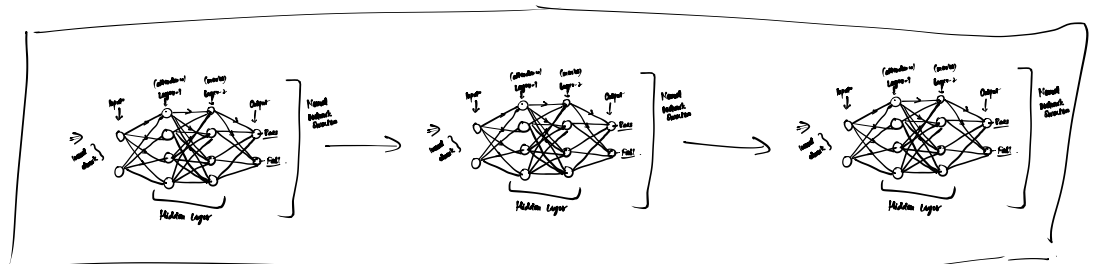

Deep Learning :-

Transformers → Combination of various neural network in sequential manner.

Transformer Model ⇒

These transformers are used to generate new information.

Large Language Models :-

→ Transformer models trained on huge amount of data.

→ eg. gpt-3.5, gpt-4o, opus, sonnet, gemma, llama 1.5 etc
